Lunar

Tel Aviv
Israel

Lunar is an open breach monitoring and cyber threat intelligence platform that gives organizations real-time visibility into their exposed data across the open, deep, and dark web.Built on Webz.io’s extensive data infrastructure, it continuously aggregates intelligence from breach dumps, infostealer logs, underground forums, and other illicit sources to identify compromised credentials, leaked sessions, and early indicators of account takeover. Designed to shift security teams from reactive to proactive defense, Lunar transforms massive volumes of cybercrime data into clear, prioritized insights. It provides rich forensic context, including malware details and access patterns, enabling organizations to quickly assess the severity of exposures and take targeted remediation actions.At its core, Lunar is built on the principle that every organization has the right to know when its data has been compromised.
