

WEBINAR: Shifting Your Network Security Architecture To The Cloud

Seattle, Washington
USA

Thursday, July 8 2021 | 11:00AM PT (2:00PM ET) Migrating to the cloud provides significant benefits for organizations, but it can present its own unique security challenges. Your legacy security tools and practices that protect your traditional infrastructure or network architecture may not adequately address risks for the cloud environments. Organizations should shift their security mindset, systems, and tools to resolve vulnerabilities and protect their assets in the cloud effectively. In this webinar, SANS and AWS Marketplace will discuss how to adapt network security architecture and control implementation to a cloud-based model. They will cover technologies, processes, and policies that organizations can use to update their network security model and design their cloud network security controls.
