Practice Labs is an IT competency hub, where live-lab environments give access to real equipment for hands-on practice of penetration testing, ethical hacking, red team blue team fundamentals, and other essential cybersecurity skills. Our solution consists of live (not simulated) IT Practice Labs and Exam Preps aligned with certifications from leading vendors such as CompTIA, Microsoft, Cisco and VMware. The Practice Labs library expands on an ongoing basis, in line with the requirements of our partners and customers. All our modules can be 'mixed and matched' to create curriculum-based or system-linked Custom Labs.
